

Dear Valued Customer,

2020 was full of revelations, particularly as it pertained to the impact of the use of fossil fuels on the environment.

2021 is looking to not be any different as environmental policy is a central peg of legislation at the state and federal levels. As you may have heard, the Washington State Legislature is considering the adoption of a Clean Fuel Standard.

Should Washington State adopt a Clean Fuel Standard, it will create an even playing field for renewable diesel and sustainable aviation fuel to compete, allowing us to competitively supply renewable fuels into Washington. For you, it provides a clear regulatory framework to guide your decisions on climate, energy and transportation. You will be able to choose to run your existing fleets and supply chain on renewable fuels instead of fossil fuels, achieving your climate goals faster and more affordably.

Importantly, the adoption of HB 1091 will create a corridor stretching from British Columbia to California where low emission, renewable fuels are encouraged and incentivized instead of fossil fuels. This "green corridor" equals certainty that the decision you make to reduce carbon emissions and pollution will be competitive and viable in multiple, connected markets.

The time is NOW to take action and be on the right side of history in the fight against climate change. Neste has developed the attached social media toolkit to drive further awareness of the Clean Fuels Standard and asks that you please share across your social media channels and with your employees. As business leaders, we have the obligation to call for policy makers to help create a more sustainable future by adopting market based, technology neutral solutions that accelerate the use of low and zero emission fuels.

Please do not hesitate to reach out with any questions. Thank you.

Sincerely,

Jeremy Baines
President
